

Secure Email - Stop the most common and damaging cyber threats and rapidly detect, quarantine, investigate, and remediate spam, phishing, ransomware, and business email compromise. Secure Email comprehensive's protection for on-premises and cloud-based email and enhances Office 365 security.

Benefits:

- Detect and block threats with threat intelligence from machine learning.
- Combat stealthy malware and remediate it to contain its impact.
- Advanced ability to quickly block new blended email-based attacks
- Drop emails with risky links automatically or block access to newly infected sites with real-time URL analysis to protect against phishing.
- Gain a real-time understanding of senders, authenticate email identities and behavioral relationships to protect against BEC attacks.
- Protect sensitive content in outgoing emails with Data Loss Prevention (DLP) and easy-to-use email encryption.
- Gain maximum flexibility with a cloud, virtual, on-premises, or hybrid deployment.
- Strong capability to control or encrypt sensitive outbound email.
- Integrate key security operations functions like visibility, detection, automation, investigation, and remediation with XDR.

Features: *(not all inclusive)*

Data Loss Prevention (DLP)¹: Scan email content for sensitive information. Control what leaves the network and prevent data exfiltration.

Domain Protection¹: Prevent phishing emails being sent using a customer domain(s).

Email Encryption Service¹: Send and receive highly secure messages, provide read receipts, recall, expiration, and control over forward and reply capabilities.

Forged Email Detection: Protects against BEC attacks focused on executives.

Global Threat Intelligence: Fast, comprehensive email protection backed by Talos.

Graymail Detection: Safe unsubscribe of marketing, bulk messages etc.

Image Analyzer: Scans for adult content in images contained in emails.

Mailbox Auto Remediation (MAR): Identify malicious content and push retrospective alerts.

Malware Defense: and Analytics provide file reputation scoring and blocking.

Outbreak Filters: Defend against emerging threats and blended attacks.

Threat Connector: Stop deception-based attacks such as social engineering & BEC.

Safe Print: Allows for malicious attachments to be converted into an image.

Sender Domain Reputation (SDR): Block unwanted email with reputation filtering.

Spam Protection: Block unwanted spam with catch rate > than 99%.

URL Protection: Protect against malicious URLs based on reputation or category.

Virus Defense: Multilayered, multivendor approach to virus filtering.

Secure Email Packages:

	<u>Essentials</u>	<u>Advantage</u>	<u>Premier</u>
Anti-spam, Domain Rep & URL Filter	✓	✓	✓
